

CORN GLUTEN FEED PELLETS (CGFP)

Feeding CGFP to dairy cows is a viable option to increase milk production by providing supplemental rumen degradable protein and energy, putting more dollars in your pocket.

CGFP is the base product for numerous dairy rations around the world. With solid amounts of protein and energy in pelletised form for added flowability, this product is ideal for your silo blends. CGFP is produced as a byproduct of the wet milling process of maize grain. It offers medium protein and high energy, consisting of a grain fraction and whole stillage. For ruminants, this palatable, low-starch product is high in rumen degradable protein, B vitamins, phosphorus and highly digestible fibre.

Feeding recommendation:

CGFP is suitable to feed during any stage of the farm cycle when protein is needed in the diet. Requirements will depend upon your farming system.

Storage:

Store in a dry area to maintain quality. Moisture contact can cause growth of moulds and toxins. Precautions should be taken against rodents and birds.

Typical Analysis:

Dry Matter	89%
Energy	12.7 MJME/kgDM
Starch	8%
Crude Protein	21%
Fat (Oil)	3%
NDF	33%
Crude Fibre	9%

* All product fumigated before landed in New Zealand to MPI standards..

* Product may be derived from GMO corn and have variances from above due to nature.
